Insider Secrets

How to Increase Your Odds When Picking Numbers to Win the Lottery.

I know it sounds almost impossible. It did to me when I first heard it, but it's true, and I'll show you how to do it. Screen shots are provided below for ease of understanding.

You can increase your odds when playing the lottery.

You don't have to go out and buy 500 tickets to increase your odds. The best part is that this information can be used for as few or as many tickets as you wish to play.

This book is short, sweet and to the point. I can't guarantee that you'll will win, but I do guarantee that you will improve your odds using this method, and it's really quite simple to apply.

There are mathematics at play in this method, but I will leave that up to you to research if it's a subject that interests you. You don't need to know the math and I think that most people would just like to know how to apply the technique, so here we go!

How to pick better numbers, and increase your chances:

When most people pick numbers, we usually either let the machine do it, using quick pick, select numbers that are significant to us in some way; birthdays, anniversaries, a friend or family members age, and many other random numbers combinations. That strategy is fun, but it's all chance. What we want to do here is get an edge against the house!

Most people know that they can check their numbers after a drawing, on the state lottery website, but there's much more that you can do while there! In this example we will use the California Lottery website for educational purposes.

If you don't know your states lottery website, simply use Google to search your state plus the word "lottery" and the website should come up.

Mega Millions

If your state's lottery website does not provide this technique, don't worry, you are still in the game. Many states participate in the Mega Millions game, from California to New York, you can simply use the California website to access the tool, as the numbers will be the same across all states that participate.

This works with the Mega Millions lottery game. Many other lotteries offer similar tools for their specific games.
States that participate in Mega Millions are as follows:
Mega Millions: CA · GA · IL · MD · MA · MI · NJ · NY · OH · TX · VA · WA

Instructions:

First, open your favorite web browser and enter the web address
http://www.calottery.com/ and click on "Winning Numbers" at the top of the page.
Next, Click on the "Mega Millions" banner image that features the week's winning numbers.
Now, from the page that loads - Click the link on the left hand navigation that reads "Winning Numbers"

MEGA Millions & SuperLOTTO Plus give players 4 chances to become a millionaire! Tuesday draws, Wednesday & SuperLOTTO Plus draws.

Try a "California Combo." Ask for the "California Combo", you will receive a ticket with $5 worth of quickpicks for MEGA Millions and another ticket with $5 worth of quickpicks for SuperLOTTO Plus all in one simple and quick transaction.

MEGA Millions is the largest multi-state lottery game in North America! We are proud to offer this exciting new game to our players!

Please use the How to Play and Question & Answers pages to get all the information you seek. Additional information on MEGA Millions is available at this website http://www.megamilions.com.
Next, on the following page click the link on the left hand side that reads "Number Frequency"

This is the location that will reveal the little know secret that will drastically improve the way you select numbers. It will reveal how often the numbers are actually showing up in the drawings (valuable information when picking numbers).
Once the page has loaded you will be able to sort the page in one of two ways by number or by frequency. Click the link that reads “Sort by Frequency”. This will order the numbers according to how often they have been drawn in past lotteries.
At the top of the list, you will see the numbers that are drawn least often, and as you continue down the list, the numbers will increase in frequency. At the very bottom of the list is where you will find the most frequently drawn numbers.

You will see an interesting pattern emerge. Notice that some numbers are drawn much more frequently than others. For example: If you choose the number 28, your odds will be much lower than if you were to choose 53, because the number 28 has only been drawn 21 times, whereas the number 53 has been drawn 44 times, more than twice as often.
This tool offers both the frequency of the standard 5 numbers (left column) as well as the frequency of the Mega Number (right column).

By choosing numbers that appear more often, you will improve your odds when playing, and dramatically increase your chances of winning.

This is a powerful tool, because certain numbers not only appear more often, but they appear much more often than others.

While checking this week’s winning numbers against the chart to determine where the numbers for the week fell in the frequency list, I was astounded to find that all the numbers from the weekly draw appear with an extremely high frequency rating.

Please scroll down/
In fact, **all** of the weeks winning numbers appear at or near the very end of the frequency list, where the most frequent numbers appear. (see below)

This is a screen capture of the bottom of the list with the winning numbers marked. The numbers for the week were 10, 30, 44, 46, 48, and **44**

You'll notice that only 5 numbers are marked, this is due to the fact that the number 44 came up twice in the drawing. This illustrates just how powerful using this technique can be.
As you can see, this is a powerful tool for choosing lottery numbers. In closing I wish you all the best! Good Luck!

Go out and tell your friends and family, so they too will be able to choose better numbers, and they too will be able to get an edge on the house.

Good luck, I hope you win... and win big!
